

Sistemi ICT per il Business Networking

Electronic Data Interchange (EDI)

Docente: Vito Morreale (vito.morreale@eng.it)

Introduction

- **Need** of a fast and standardized processing of the business
- **Electronic exchange of data**: a modern instrument to accelerate internal and external processes
- **Electronic Data Interchange (EDI)**:
 - the computer-to-computer exchange of structured information, ...
 - ... by agreed message standards, ...
 - ... from one computer application to another ...
 - ... by electronic means and ...
 - ... with a minimum of human intervention

Electronic Data Interchange (EDI)

- In **common usage**, EDI is understood to mean **specific interchange methods agreed upon by national or international standards bodies** for the **transfer of business transaction data**
- Advantages:
 - **Avoidance of costs-intensive recording activities susceptible to error**
 - **Automatic data exchange** with standardized formats
 - Communication **between computer applications**
 - **Faster flow of information** (at any time and world-wide)
 - **Costs saving**

Electronic Data Interchange (EDI)

Business processes without EDI

- document creation → printout and shipment → re-recording by business partner's data department
- This 'intermediate storage' on paper is also referred to as an '**interruption of medium**'.
 - **Avoiding this 'interruption of medium'** in the logistical chain between a company and the supplier **yields** a lot of **cost saving** potentials for both sides

1 aprile 2006

ICT Systems for Business Networking

Electronic exchange of business data

- The electronic exchange of business data **enables** quick information exchange operations between business partners, **without any delays** in time, **24 hours a day, 7 days a week**
- To be able to implement such processes, **the corresponding message formats and communication structures have to be standardised (or agreed)**
- Surprisingly, in this era of technologies such as XML services, the Internet and the World Wide Web, **EDI is still the data format used by the vast majority of electronic commerce transactions in the world**

1 aprile 2006

ICT Systems for Business Networking

EDI

- **Electronic Data Interchange (EDI)** is defined as the **transfer** of **structured data** by **agreed message standards** **from computer to computer** **by electronic means**
- Therefore key concepts are the following:
 - structured data
 - message standards
 - from computer to computer
 - electronic means

1 aprile 2006

ICT Systems for Business Networking

EDI: structured data & from computer to computer

- **What is structured data? How is it different from the printed document? Is it the same as electronic mail?**
- **Printed documents and electronic mail** are designed for humans
 - they can be easily created and acted upon by humans
- **EDI** requires that the computer system itself can easily generate and process messages
- The data format is **designed for computers**
- EDI is **not very readable for humans**

1 aprile 2006

ICT Systems for Business Networking

EDI: message standards

- Clearly, **trading partners must agree** what data is being exchanged, and in what sequence their computer systems should generate the data. **But why to have standards?**
- EDI is concerned with exchanging messages in an **open environment** → **Any company can join**
 - **No one** company **can impose** its own data standards (?)
 - **Internal data standards** are fine for use within an organisation, but will not work outside the organisation
 - There needs to be a **universally agreed** standard message structure
 - IMPORTANT: **universal** doesn't mean the whole world has to agree; it means **any company participating in a particular EDI community** must agree

1 aprile 2006

ICT Systems for Business Networking

EDI: electronic means

- **In the early days of EDI** data was put onto **magnetic tape** and either **posted or sent by courier** to the recipient, who then loaded the tape on a tape deck and the computer read it in the system
- This method was fine for a while, but **problems** arose:
 - The tape was being **physically sent**, and this took **time**
 - The number of tapes that any one organisation needed to handle was growing, leading to a **scheduling problem**
 - The tapes themselves were **vulnerable**

1 aprile 2006

ICT Systems for Business Networking

EDI: electronic means

- The solution to all of these problem is **to send data by telecommunications**, and **since the early 1980's** this has been the increasingly preferred method
- However, this method is not without its own problems:
 - **Timing problem** - bilateral computer links require the both organisations schedule the link at the same time
 - **Each link costs** money
 - **When the number of trading partners grows**, the number of one-to-one links eventually becomes unmanageable
 - **Incompatible computer systems**
- **One solution** is to join an EDI service run by a **Value Added Network (VAN)** supplier

1 aprile 2006

ICT Systems for Business Networking

EDI Standards

- Designed **to be independent** of lower level technologies and **transmitted** using **Internet protocols** as well as **private networks**
- It is important to **differentiate** between the EDI documents and the methods for transmitting them
 - The **older transmission methods** are being replaced by Internet Protocols such as FTP, telnet and email, although standards for these media are still emerging
 - In 2002, the IETF published RFC 3335, offering a **standardized, secure method of transferring EDI data via e-mail**
 - An IETF working group, EDIINT, is preparing similar documents for **HTTP and FTP transfers**

1 aprile 2006

ICT Systems for Business Networking

EDI documents

- EDI documents contain **the same data** that would normally be found in a paper document used for the same organisational function
 - Example: an EDI 940 **ship-from-warehouse** order is used by a manufacturer to tell a warehouse to ship product to a retailer
 - a ship to address
 - a list of product numbers (usually a UPC code)
 - quantities
 - other information if the parties agree to include it
- EDI is **not confined to just business data** related to trade but encompasses all fields such as **medicine** (patient records, laboratory results, etc.), **transport** (container and modal information, etc.), **engineering, construction**, etc.

1 aprile 2006

ICT Systems for Business Networking

EDI Standards

- Three major sets of **EDI standards**
 - **UN/EDIFACT** is the only international standard (in fact, a United Nations recommendation) and is predominant in all areas outside of North America
 - **ANSI ASC X12 (X12)** and the **Uniform Communication Standard (UCS)** are popular in North America and are **very similar to each other**

1 aprile 2006

ICT Systems for Business Networking

EDI Standards

- These standards **prescribe**
 - the **formats**
 - **character sets**, and
 - **data elements** used in the exchange of documents and forms
- The standard **says**
 - which pieces of information are **mandatory** for a particular document
 - which pieces of information are **optional** for a particular document
 - the **rules for the structure** of the document

1 aprile 2006

ICT Systems for Business Networking

Trading partners

- **Trading partners** (EDI Terminology): organizations that send or receive documents from each other
- The trading partners **agree** on some human readable specifications (also called **specification sheets**)
 - the **specific information** to be transmitted and
 - **how** it should be **used** (semantics)
- **Larger companies**
 - have **existing specification sheets** and
 - are usually **unwilling to negotiate**

1 aprile 2006

ICT Systems for Business Networking

Inbound and outbound document

- In EDI terminology "**inbound**" and "**outbound**" refer to the **direction of transmission** of an EDI document in relation to a particular system (not the direction of merchandise, money or other things represented by the document)
 - For example, an EDI document that tells a warehouse to perform an **outbound shipment** is an **inbound document** in relation to the warehouse computer system. It is an **outbound document** in relation to the manufacturer or dealer that transmitted the document.

1 aprile 2006

ICT Systems for Business Networking

EDIFACT

- The acronym stands for **United Nations/Electronic Data Interchange For Administration, Commerce, and Transport**
- Developed under the **United Nations**
- The work of maintenance and further development of this standard is done by the **United Nations Centre for Electronic commerce For Administration, Commerce, and Transport** (UN/CEFACT) (under the **UN Committee on Trade, Economic and Social Council**)
- EDIFACT was developed from 2 fairly widely used **standards** and incorporate the best of the both
 - American JEDI and the United Nations standard for Europe

1 aprile 2006

ICT Systems for Business Networking

United Nations Centre for Electronic commerce For Administration, Commerce, and Transport (UN/CEFACT)

- **Web site:** <http://www.unece.org/cefact>
- **Mission:** to **improve** the ability of business, trade and administrative organizations, from developed, developing and transitional economies, to exchange products and relevant services effectively - and so contribute to the growth of global commerce
- UN/CEFACT facilitates the **development of e-business standards** that can **cross all international boundaries** and help **lower transaction costs**, simplify data flow and reduce bureaucracy
- Work outputs of UN/CEFACT activities include **ebXML**, UN/CEFACT's Modelling Methodology (UMM) and **UN/EDIFACT**.

1 aprile 2006

ICT Systems for Business Networking

UN/CEFACT

cefact@unece.org', 'United Nations Economic Commission for Europe', and 'All rights reserved. Terms of Use | Privacy Notice'."/>

1 aprile 2006

ICT Systems for Business Networking

EDIFACT

- EDIFACT has been adopted by the International Organization for Standardization (ISO) as the **ISO 9735**
- Provides:
 - a **set of syntax rules** to structure data
 - an **interactive exchange protocol** (I-EDI)
 - **standard messages** (allowing multi-country and multi-industry exchange)

1 aprile 2006

ICT Systems for Business Networking

EDIFACT

- The **EDIFACT Standard is**:
 - **application independent**
 - **communication medium independent**
 - **machine independent**
- So EDI and more concretely **EDIFACT gives to the user**:
 - **quicker delivery** and overall **greater accuracy in ordering**
 - **improved logistics** generally, particularly resulting in **lower storage/warehousing costs**

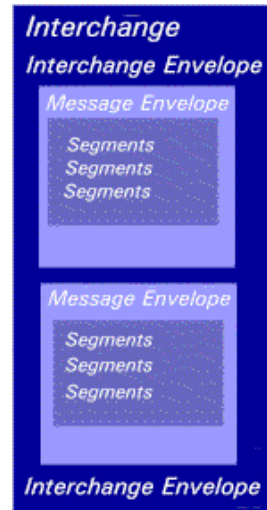

1 aprile 2006

ICT Systems for Business Networking

EDIFACT - Structure

- EDIFACT has a **hierarchical structure**

- The top level element is referred to a **message**.
- A message is a sequence of groups and segments.
- A **group** or **segment** can be mandatory (M) or conditional (C) and can be specified to repeat
 - For example C99 would indicate between 0 and 99 repetitions of a segment or group, whereas M99 would mean between 1 and 99 repetitions

1 aprile 2006

ICT Systems for Business Networking

EDIFACT – Structure: Data elements

- A vital part of the EDIFACT process is the data element directory which is contained within an international standard, ISO 73 72, and it's referred to as the **Trade Data Elements Directory (TDED)**
- Each data element has **a set of attributes**. The basic attributes interesting to EDIFACT users set out of the TDED are:
 - Coded tag or Identifier
 - Title
 - Plain text descriptor
 - A format (Length and data type or class)
 - Date of insertion in the directory

1 aprile 2006

ICT Systems for Business Networking

EDIFACT – Structure: Format

- To indicate the format or **data type** of a data element EDITACT uses the following notation:
 - **a***n* means n alphabetic characters
 - **n***n* means n numeric characters
 - **an***n* means n alpha-numeric characters
 - **a**..*n* means up to n alphabetic characters
 - **an**..*n* means up to n alpha-numeric characters
 - **n**..*n* means up to n numeric characters

1 aprile 2006

ICT Systems for Business Networking

Example of EDIFACT message

- Used to answer to a product availability request

```
UNB+IATB:1+1APPC+LHPPC+940101:0950+1'  
UNH+1+PAORES:93:1:IA'  
MSG+1:45'  
IFT+3+?*XYZCOMPANY AVAILABILITY?*''

APD+EM2:0:1630::6+++++DA'  
UNT+13+1'  
UNZ+1+1'
```

- ' is a **segment terminator**
- + is a **data element separator**
- : is a **component data element separator**
- * is a **repetition separator**

1 aprile 2006

ICT Systems for Business Networking

Example of EDIFACT message

- **UNH+1+PAORES:93:1:IA'** - the header segment
 - required at the start of every message
 - the message name and version is PAORES 93 revision 1 and it was defined by the organisation IA (IATA)
- **IFT+3+NO MORE FLIGHTS'** - an 'Interactive Free Text' segment containing the text 'NO MORE FLIGHTS'
- **UNT+13+1'** - the tail segment
 - It indicated that the message sent contains 13 segments

VESDEP	Vessel departure message
WASDIS	Waste disposal information message
WKGRDC	Work grant decision message
WKGRRE	Work grant request message

1 aprile 2006

ICT Systems for Business Networking

CNTCND - Contractual conditions message

- A message **sent by a customer to a supplier** and other interested parties providing the **contractual conditions of a previously negotiated contract** in order to enable the **automatic processing of invoices for orders** which have been made against the contract or for the completion of identified stages within the contract
- This message is typically used in the case where **a general contract has been established** between the customer and the supplier against which goods will be ordered over a period of time on an order by order basis
- The contract will have been **previously negotiated** and accepted

1 aprile 2006

ICT Systems for Business Networking

Despatch advice message (DESADV)

- A message specifying **details for goods despatched or ready for despatch under agreed conditions**
- **Principles:**
 - The message intent is **to advise of the detailed contents of a consignment**
 - The message relates to **one seller** and **one buyer** or their respective agents
 - The message relates to a **single despatch point** and **single or multiple destination points**
 - It may cover **a number of different items or packages**

DESADV - 3227: Location function code qualifier

1	Place of terms of delivery
	(3018) Point or port of departure, shipment or destination, as required under the applicable terms of delivery, e.g. Incoterms.
2	Payment place
	(3108) Place where funds are to be, or have been made available to the creditor.
3	Tare check place
	Place where equipment tare has been or must be checked for official assessment.
4	Goods receipt place
	Place at which the goods have been received.
5	Place of departure
	(3214) Port, airport or other location from which a means of transport or transport equipment is scheduled to depart or has departed.
6	Ward bed
	A bed in a ward.
7	Place of delivery
	(3246) Place to which the goods are to be finally delivered under transport contract terms (operational term).
8	Place of destination
	Port, airport or other location to which a means of transport or transport equipment is destined.

8179 - Transport means description code

X6	Aircraft	A machine capable of flight. Note: 1. This code value will be removed effective with directory D.06A.
X7	Car with caravan	A caravan towed by a car. Note: 1. This code value will be removed effective with directory D.06A.
X8	Container ship	Vessel capable of carrying containers and other cargo. Note: 1. This code value will be removed effective with directory D.06A.
X9	Exceptional transport	Transport for which common characteristics are not applicable (e.g. big transformers requiring special wagons, special tackles, etc.). Note: 1. This code value will be removed effective with directory D.06A.
X10	Bus	To specify that the means of transportation is a bus. Note: 1. This code value will be removed effective with directory D.06A.
X11	Ship	A large vessel navigating deep water. Note: 1. This code value will be removed effective with directory D.06A.
X12	Ship tanker	A large vessel equipped to transport liquids. Note: 1. This code value will be removed effective with directory D.06A.
X13	Ocean vessel	An ocean-going vessel that is not a ship. Note: 1. This code value will be removed effective with directory D.06A.
X15	Taxi	A means of transport identification code indicating a taxi. Note: 1. This code value will be removed effective with directory D.06A.
X16	Barge	A category of boat used to transport material over water. Note: 1. This code value will be removed effective with directory D.06A.

ICT Systems for Business Networking

Current state of EDIFACT

- EDIFACT is still **widely used** in the **high tech**, **civil aviation** and **tourism** industries and is likely to **remain** so for some time ...
 - ... due to **the amount of software** making use of it and the need for newer systems to be able to integrate with legacy systems
- **Europe** started early with adopting EDIFACT and therefore has a large installed base, where as for example the **Asian region** started later with B2B implementations and is therefore using more XML standards

1 aprile 2006

ICT Systems for Business Networking

ANSI ASC X12

- The **official** designation of the **US National standards body** for the development and maintenance of EDI standards for the **United States**
- The group was founded in **1979** and is an accredited standards committee under the **American National Standards Institute**
- The acronym stands for "**American National Standards Institute Accredited Standards Committee X12**"
 - with the designation of X12 being a **sequential** designator assigned by ANSI at the time of accreditation with no other significance
- **RosettaNet** is a growing industry de-facto standard in the high tech industry, partly replacing ANSI

1 aprile 2006

ICT Systems for Business Networking

EDIFICE

- Web site: <http://www.edifice.org>
- The European B2B Forum for the **Electronics Industry**
- Provides a **forum** for companies with interests in Computing, Electronics, and Telecommunication, which as a group, drives and enables global standardised B2B adoption in Europe
- EDIFICE represents **the majority of the European electronics industry** and is **recognised as such by other organisations**
- EDIFICE is a **non-profit organisation**, organised in the form of an association and governed by the articles of this Agreement, any regulations promulgated hereunder and by Articles 60-79 of the Swiss Civil Code

1 aprile 2006

ICT Systems for Business Networking

EDIFICE

- The **objectives** of EDIFICE are:
 - to support, influence and promote the development, implementation and use of **international standards** and related implementation **guidelines** for B2B;
 - to design, develop and maintain a **Framework for B2B**;
 - to maintain **relationships with other communities** and be receptive to **cross industry collaboration**, aiming at the implementation of B2B;
 - to act as a **B2B competence centre** for the industry, setting direction, creating awareness and providing learning opportunities on B2B concepts;
 - to **share B2B experiences** on the implementation of standards

1 aprile 2006

ICT Systems for Business Networking

Web-EDI

- **Web-EDI** solutions **translates EDI data** into many formats (including HTML, XML and proprietary formats), **allowing non-EDI users to read and send EDI messages** to their trading partner
- The core company ("Hub") or a trading partner can benefit from **fast, secure, reliable Web-based trading solutions**
 - Companies of all sizes, particularly smaller organizations
- **To reduce the complexity, cost, and time** associated with conducting business electronically

1 aprile 2006

ICT Systems for Business Networking

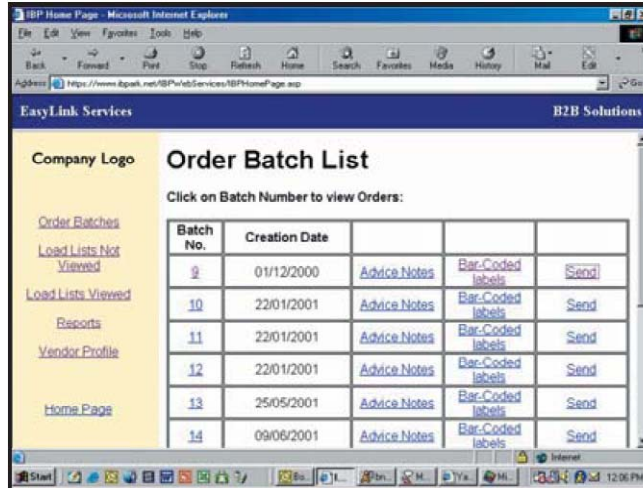

Web-EDI

- Web-EDI provides companies with options **to reach trading partners** who have less sophisticated or non-compatible e-business infrastructures
- Web EDI service acts as a **bi-directional EDI to HTML, XML, or proprietary format converter**
 - "Hub" customers can continue sending and receiving EDI **using their current systems and applications**
 - Smaller trading partners can then use a **secure browser-based trading tool** to view, update and send EDI documents such as Invoices, Purchase Orders, Advanced Ship Notices, and more

1 aprile 2006

ICT Systems for Business Networking

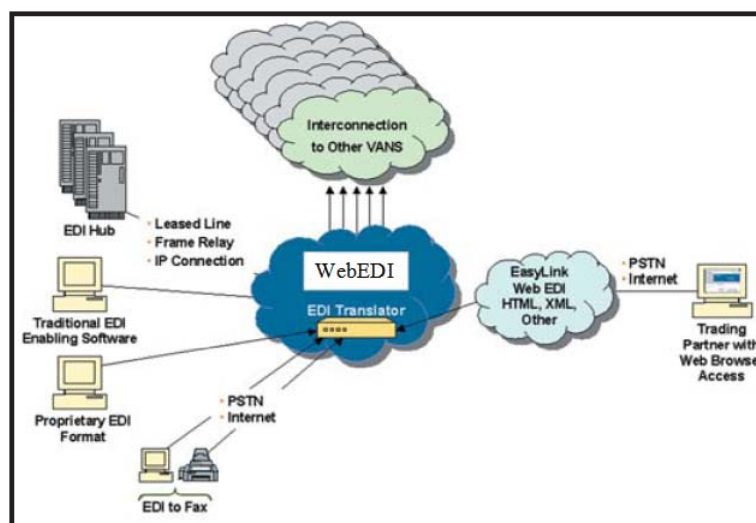

Web-EDI

1 aprile 2006

ICT Systems for Business Networking

Web-EDI Architecture

1 aprile 2006

ICT Systems for Business Networking

Web-EDI features

- **Main features** a Web EDI solution should provide:
 - **Multiple network connectivity options**, including dedicated, dial-up, and many IP based access methods
 - **Interconnections with major e-commerce networks** worldwide
 - High capacity networks for **rapid message delivery**
 - Strong **security**, including HTTPS, IPSec, SSL, and others
 - **Non-repudiation** and **message delivery confirmation**
 - Technical implementation **support** and **customization** services

1 aprile 2006

ICT Systems for Business Networking

Web-EDI benefits

- Some of **benefits** a Web EDI solution should provide:
 - **Communicate electronically** with all trading partners
 - **Decrease business processing costs** and **fuel faster transaction** completion via **elimination** of slow, manual, error-prone, paper-intensive transaction delivery methods
 - **Increase efficiency** by consolidating transaction delivery through a single vendor with multiple modes of delivery
 - **No changes to current EDI processes/systems**: Web EDI leverages existing infra-structure to reach all of an enterprise's trading partners, regardless of their preferred connectivity
